
Ube Agri-Materials, Ltd.

Location : 1988-7 Oaza-Kogushi, UBE-CITY, YAMAGUCHI-KEN, 755-0067, Japan

Representative : Toshiyuki ONO

Business Classification	Capital	No. of Employees	Established
Chemical Industry	¥490,000,000	113	1955

Description of Business : Our company contributes to saving energy for agricultural production as a manufacturer of compound fertilizers.

Main Products and Business : Manufacturing of compound fertilizers, release fertilizer and ameliorant
Main Equipment and Facilities : 3 plant for compound fertilizer 1 plant for coating fertilizer
Main Facilities for Preventing Pollution : 3 dryer exhaust collector equipment 1 dryer exhaust deodorizing machine
Licensed and Qualified Engineers, Specialists : 4 energy efficiency control engineers 4 pollution control managers

Environmental Preservation Activities

Environmental Pollution Prevention	Protection against air pollution and offensive odors
------------------------------------	--

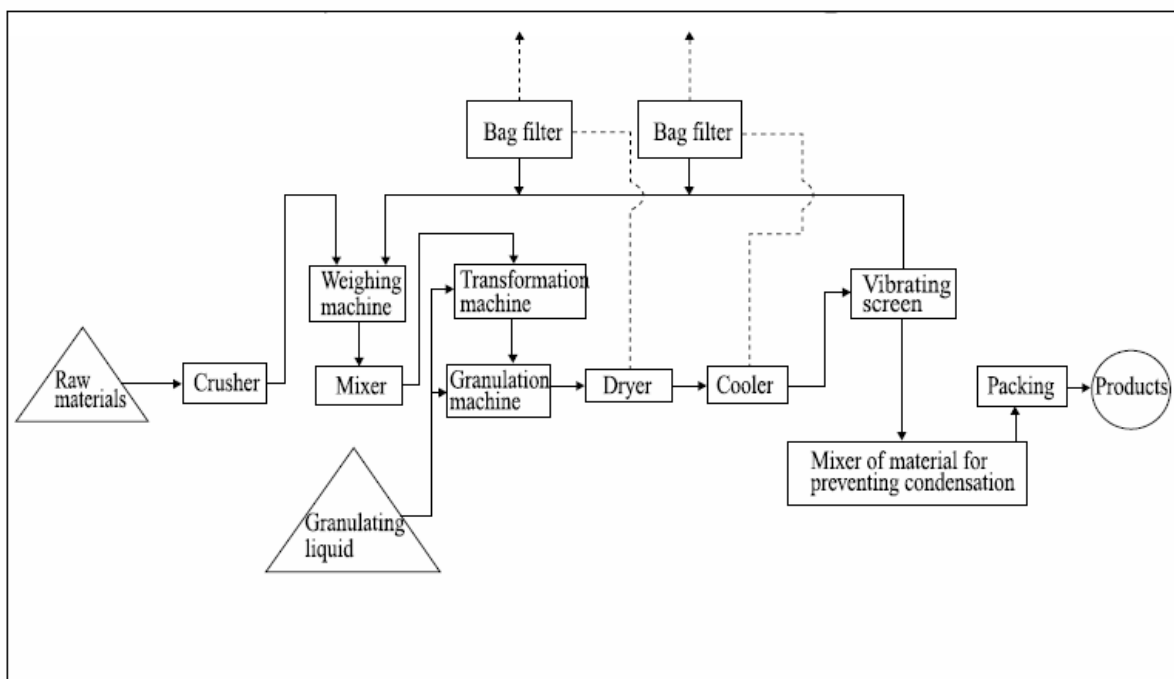

Eco-business and Eco-products

Services for Environmental Preservation	Coating fertilizer made of bio-degradable plastics (control elution of fertilizer components)
---	---

International Contributions for Environmental Technology

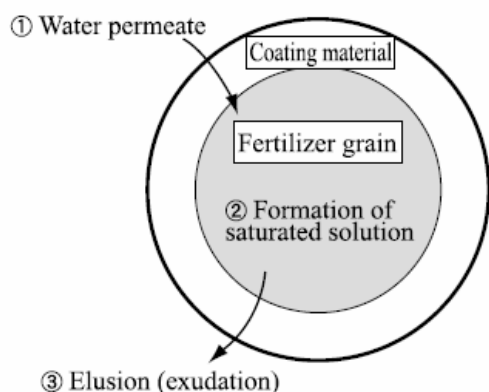

In 1987 experts worked on making natural waste into fertilizer as part of the JICA program. (the former Ube Compound Fertilizer Ltd.)

Compound Fertilizer Manufacturing Process

Coating fertilizer

The outside of the fertilizer (2-4mm grain) is coated with several kinds of resin. They control the time and speed for elution of the fertilizer. Plants absorb required amounts of the fertilizer in appropriate time in this way so that it prevents from a quick release of the fertilizer.

Organic fertilizer

The organic fertilizer is mixed grain with an immediate effect and a slow effect organic fertilizer. The fertilizer contains 50% of organic fertilizer which activates microorganisms in the soil.
